

---

A typeface that is characterized by a large x-height relative to its ascender and descender. Popular examples of this type include Times New Roman, Bodoni, and Garamond. The word "tacteing" should not be a typo. You can find it under the 'Fonts' section on Wikipedia.

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua. Ut enim ad minim veniam, quis nostrud exercitation ullamco laboris nisi ut aliquip ex ea commodo consequat. Duis aute irure dolor in reprehenderit in voluptate velit esse cillum dolore eu fugiat nulla pariatur. Excepteur sint occaecat cupidatat non proident, sunt in culpa qui officia deserunt mollit anim id est laborum. Spend some time reading things written by others who use the same font. Pay special attention to the actual font style you have chosen. Even if "X is better than Y", this is still an opinion, not a fact. The best way to learn the strengths and weaknesses of a particular typeface is to read current releases without any emotional attachments. Typography is an evolving art that's enjoyable only when the artistry shines through. Asking for help on typography can be seen as being too needy, but it's okay to ask for opinions from your peers since they are likely to have a strong opinion about your problem. Share your opinions with them, but never plead for help! Don't be that guy on the internet. There are many methods of choosing a font. Here are some methods you can use. Finding a font on the internet is the first step to making your own font. Most of us have some way of getting fonts from the internet, so it would be hard to not have access to any of the fonts on this list. Some common ways to find fonts online include: The first method involves searching for typefaces on Tofu or Google with specific parameters (for example, if you're looking for serif typefaces with narrow x-heights). The second method is good if you don't know exactly what you're looking for, or if you're not planning on using the font in a specific way. This method involves browsing through the common font lists to get an idea of what's out there. If you have a font list to share please add them here.

There are many ways to create your own fonts. One of the most popular tools used today is FontForge, which allows users to edit fonts through code rather than design software. Other programs includes Adobe Illustrator or CorelDraw, which are both vector based image editing program.
